Code Quality: The project's coding standards have been highly praised for their consistency and conciseness. The codebase is well-organized and easy to navigate, facilitating future development and maintenance.

User Interface Adjustments:

1. **Button Size**: Feedback highlighted that the buttons for rename, delete, and download functions should be made larger to improve user interaction and accessibility.
2. **Upload Section Placement**: It is recommended to reposition the upload section to the middle of the interface to make it more prominent and user-friendly.

Suggestions for Future Development:

1. **Login/Logout Capability**: Implementing a login/logout feature to enhance security and provide a personalized user experience.
2. **Dashboard Integration**: Developing a dashboard for users to have an overview of their activities, files, and notifications in one place.
3. **File Modification**: Introducing the ability to modify files directly on the platform, adding versatility and convenience for users.
4. Additional features that could enhance the user experience and functionality of the NetConnect application were also suggested for future iterations.
